

# MOOG

Halex Development and Distributing

8/23/96

Moog Inc. is a leader in the aerospace industry and due to this, we are on the cutting edge of new technology. This position tends to be a problem from the maintenance aspect. Moog Inc. hydraulic systems fluid cleanliness is monitored quite closely.

Upon the recommendation of Mark Perry, Halex Coils were installed on two (2) of Moog Inc.'s JP-5 hydraulic systems. After a six-month period, the .05 to 3 micron level of fine metal particulate was eliminated. The Halex Coil has proven to be very effective in our installations. We are quite pleased with the results and recommend the Halex Coils use.

Haley - Dave Kay.

Hi Dave,

Here are some pictures of the  
installation on the Moog Fuel Cell.

Testing is going well - hopefully soon I'll  
have a cert. letter for us.

It was a great show. I'm getting  
calls and discussions all the time as a  
result of it. Please forward any leads I  
might help you with. Talk to you soon -

Regards

Mark
