To Whom It May Concern:

We first started using the Halex Coil before the NASCAR race at NHIS. We ran about 200 miles of testing and practice on a new engine with the Halex coil on our oil filter. The night before the race we changed the oil and filter as is our normal practice. When we cut open the oil filter, we were shocked at the large amount of metal in the can. Preparation was being made to change the engine, when on further inspection of the filter element, our engine builder noticed that there was almost no metal in the element. The Halex Coil had trapped most of the metal before it clogged the filter.

Needless to say we were impressed, this engine ran flawlessly the rest of the season. We would like to thank David Karp and Halex Corp. for a fine product.

Sincerely,

Steven Boissoneau
President/Driver

Glenn Phillips
Crew Chief
